2) How many times was a patient admitted as an emergency and treated for the condition their RTT pathway related to during their emergency stay, therefore ending the RTT pathway?

The LHB is unable to provide the information exactly as requested, however the table below provides the number of pathways that ended with a reason of 'patient treated elsewhere' which includes being treated as an emergency, during the requested timeframe.

3) How many times did an RTT pathway end due to a patient's death?

The table below provides the number of pathways that were closed during the requested timeframe, with the reason recorded as patient deceased. It is important to note that because a patient was on an open pathway at the time of their death it is not necessarily the case that a patient died as a result of their wait.
