

FOI.20195 – Attachment 2

Reference	Date	Risk/issue
PKB-R002	18/08/25	If the bloods and demographics data feeds are not successfully integrated into PKB, then clinicians will need to continue entering blood results manually, resulting in increased risk of human error, inefficient use of clinical time, and reliance on manual processes that could otherwise be streamlined through automation and integration.
PKB-R003	26/08/25	If the CDR API and Integration Hub, both under DHCW's control, are not available until late in the year, then we may face delays in progressing the PKB integration work, resulting in missed opportunities to streamline data flows, continued reliance on manual processes, and frustration among stakeholders due to lack of timely progress on a critical enabler.
NHSApp-D005	10/02/2026	NSRs rejected - Move from project to product
