<b>Subject:</b>	End of life symptom management
<b>Date of Request:</b>	13 March 2019

**Requested**

I am keen to look at differences in End of life symptom management policies within the primary care/ acute care /district nursing patient caseloads. I am especially interested in the differences in dosage of the drug Midazolam.

**Response**

Hywel Dda University Health Board (UHB) utilises “Care Decisions for the Last Days of Life” All Wales guidance for the management of patient end of life symptoms.

Further information including the administration of medication for the management of symptoms, can be found via the following link:
