| <b>Reference:</b>       | FOI.3851.20                   |
| <b>Subject:</b>         | Holter monitoring test (ECG). |
| <b>Date of Request:</b> | 25 August 2020                |

**Requested:**

All answers for the questions below, please provide in the 2019-2021 years timeframe. Whilst I have requested information from the years 2019 to 2021 if the information is only available for some years, please specify and provide it.

1. What are the reimbursement procedures for 18 hours, 24 hours and 48 hour Holter Monitoring activities for primary care and secondary care? (if it is not possible to answer the following question, please provide a direct link to the particular website where the information might be found)
2. What are the average reimbursement prices for 18h, 24h and 48h Holter Monitoring in primary care and secondary care? (if it is not possible to provide requested information, please provide a place where the information might be obtained)

**Response:**

Hywel Dda University Health Board's (UHB) Cardio-Physiology Service (based within Secondary Care) provides a Holter Monitor service for its local population.

The provision of Holter Monitor testing and analysis (via Secondary or Primary Care clinicians) is not provided on a commissioning (provider/purchaser) basis and thus we do not require any 'reimbursement' processes or have a pricing framework.
