System definitions:

Accident & Emergency - A specialist system used to manage patients and patient clinical notes in the Emergency Department (ED)

Digital Dictation – Device used for recording and managing natural speech, allowing staff to verbally input a patients' note into a system without having to manually input it.

Document Management - Converts records into electronic format so that they can be viewed, moved around, and managed electronically on screen. Acts as a live filing system.

Scheduling - Enterprise level systems that are designed to effectively and efficiently allocate resources (staff, equipment, treatment and even data) to patients at the necessary time and place. Systems in this area range from appointment booking, typically for clinic slots, through to far more sophisticated SAP-style resource allocation and scheduling systems.
