

<b>Reference:</b>	FOI.2400.20
<b>Subject:</b>	Maternity smoking services
<b>Date of Request:</b>	28 January 2020

**Requested:**

Can you please detail the smoking cessation service provision offered by your Health Board which is targeted specifically at women using your maternity services?

**Response:**

All midwives within Hywel Dda University Health Board (UHB) are provided with Carbon Monoxide (CO) monitors. All expectant mothers have a CO reading taken at their first antenatal appointment, regardless of their self-reported smoking status. Any mothers with a reading of 4 ppm (parts per million) or greater, will be referred to the UHB's smoke free service, hosted by the Well-being Team, for support with reducing or stopping smoking.
